

ABSTRACT OF THE DISCLOSURE

In a multimedia contents converting apparatus configured to convert input multimedia contents to be displayed with a predetermined size, including
5 text media and the other media, into output multimedia contents to be displayed with a size smaller than the predetermined size, a spatiotemporal layout information setting processing unit sets a display
time of the text media included in layout information
10 on the basis of a display time of the text media calculated in a text display time calculation processing unit, and sets a playing time of the other media included in the layout information on the basis
of the display time of the text media set as the layout
15 information.
